AI1110: Probability and Random Variables

Indian Institute of Technology Hyderabad

Aditya Garg CS22BTECH11002 26 April 2023

11.16.1.12: One urn contains two black balls (labelled B1 and B2) and one white ball. A second urn contains one black ball and two white balls (labelled W1 and W2). Suppose the following experiment is performed. One of the two urns is chosen at random. Next a ball is randomly chosen from the urn. Then a second ball is chosen at random from the same urn without replacing the first ball.

- (a) Write the sample space showing all possible outcomes
- (b) What is the probability that two black balls are chosen?
- (c) What is the probability that two balls of opposite colour are chosen?

Solution:

Probability of an event E, written as Pr(E)

$$Pr(E) = \frac{\text{Number of outcomes favourable to } E}{\text{Total Number of possible outcomes}}$$
(1)

Let Z be a Bernoulli random variable

$$Z = \begin{cases} 0, & \text{if Urn 1 chosen} \\ 1, & \text{if Urn 2 chosen} \end{cases}$$
 (2)

Since both events are equally likely

$$Pr(Z = 0) = Pr(Z = 1)$$
 (3)

$$=\frac{1}{2}\tag{4}$$

Let X_1 be a random variable denoting first ball chosen from Urn 1

 X_2 be random variable denoting second ball chosen from Urn 1

Let Y_1 be a random variable denoting first ball chosen from Urn 2

 Y_2 be random variable denoting second ball chosen from Urn 2

X_1	Description	X_2	Description
0	B_1 chosen	0	B_1 chosen
1	B ₂ chosen	1	B_2 chosen
2	W chosen	2	W chosen

TABLE 1

Y_1	Description	Y_2	Description
0	W_1 chosen	0	W_1 chosen
1	W ₂ chosen	1	W ₂ chosen
2	B chosen	2	B chosen

TABLE 2

(a) Sample Space S:

$$\{001, 010, 002, 020, 021, 012, 101, (5)$$

 $110, 102, 120, 121, 112\}$

$$\therefore n(S) = 12 \tag{6}$$

(b) Let E be event that 2 black balls are chosen, The favourable outcomes are {001,010}

$$\Pr\left(E\right) = \frac{2}{12} \tag{7}$$

$$=\frac{1}{6}\tag{8}$$

$$=\frac{1}{6} \tag{8}$$

$$\therefore \Pr(E) = \frac{1}{6} \tag{9}$$

(c) Let E be event that balls of opposite colours are chosen, The favourable outcomes are $\{002, 020, 012, 021, 102, 120, 112, 121\}$

$$\Pr(E) = \frac{8}{12}$$
 (10)

$$=\frac{2}{3}\tag{11}$$

$$=\frac{2}{3}$$
 (11)
$$\therefore \Pr(E) = \frac{2}{3}$$
 (12)
